Marshall faculty and staff achievements

MERLE THOMAS JR., assistant professor of engineering technology in Marshall’s Community and Technical College, will make a presentation titled “Concurrent Engineering Design and Production” at the 37th international conference of the American Production and Inventory Control Society (APICS) on Friday, Nov. 4, at San Diego, Calif. Thomas, one of two APICS fellows in West Virginia, will present the sixth annual re­search and advances in the field. Ad­vances he will report on include systems for designing a product while at the same time developing the processes necessary for its manufacture. He said that such systems will reduce customer and factory operator to share a more active role in product design.

Two students, Sherry A. West, a computer technology major from Huntington, and Richard A. Pate, an engineering technology major from Huntington, made computer aided drafting (CAD) contributions to the paper and will receive published acknowledg­ment in the conference proceedings. Dr. ANTHONY BOWDLER, professor in the Department of Medicine, attended, as president of the division, the annual meet­ing and awards banquet held in St. Louis. He is a member of the American Society of Hematology. Bow­dler and Dr. PHILIP LEPANTO, clinical professor in the Depart­ment of Radiology, were co-chairs of the 1996 annual Congress Conference held recently in Huntington. The conference was sponsored by the MU School of Medicine, St. Mary’s Hospital and the American Cancer Society.

More participation will improve recycling effort

Dr. MAURICE A. MUPSON, professor and chair of the Depart­ment of Medicine, was appointed a member of the editorial board of the American Journal of Clinical Pathology. This appointment is effective July 1, 1994. The journal is the official publication of the Southern Society for Clinical Investigation. Mupson participated in the meeting of the Interdisciplinary Human Curricula Project Project as a member of the IGC Advisory Committee and the re­presentation of the Association of Professors of Medicine (the organ­ization of chairs of departments of medicine). The IGC is the organiza­tion designated by the Division of Medicine of the Bu­reau of Medical Education. He said that he is pleased to have his customer and factory operator to share a more active role in product design.

However, this commitment should not depend on only a select few. Every individual can make a difference.

She said that the university has helped make recycling convenient by having recycling bins at each waste can and the large recycling containers on each floor of every building.

Kirtley said that while many universities and federal agencies have mandatory recycling programs, recycling at Marshall is not mandatory but is an individual choice to conserve and help make our university shine. She said the committee urges everyone to recycle.
Wilcox named senior vice president/provost

and the two highest-ranking candidates were invited to campus for interviews and meetings with faculty, administrators and students.

"We had a number of very qualified applicants," said Grose. "However, I believe Dr. Wilcox stood out because of his expertise. He has served in just about every possible position in a university campus—from professor to dean to president. He was a corporate vice president for a national company, was an officer in the Department of Energy and most recently has been involved in developing an entirely new approach to teaching science and technology in higher education. I think the fact that we were able to attract candidates of this quality says a lot about Marshall University and the direction in which the university is heading."

Wilcox was responsible for all aspects of the development of the college which was targeted to enroll 3,250 students.
