

## ACKNOWLEDGMENTS

This work could not have been done without the generous and cordial help of many people all over the world who, in the course of many years, supplied us with bibliographic sources (too often enigmatic and hardly available); shared their ideas and discoveries in scorpion and general taxonomy; and facilitated access to scorpion collections in museums. We are grateful to: Luis Acosta, Tom Anton, Luis de Armas, Habibulla Atamuradov, Donald Azuma, Léon Baert, Yuri Balashov, Juan Barrientos, L. Bartolozzi, Gernot Bergthaler, Petar Beron, Theo Blick, Alberto Bonacina, Philip Brownell, Tomas Cekalovic, Jonathan Coddington, James Cokendolpher, H. Andrew Jeram, Paul Selden, Yaroslav Starobogatov, and George Poinar, Jr. advised us on the fossil taxa and related issues. H. Don Cameron was always very helpful with his profound knowledge of Greek, Latin, and the Code. Norman Platnick has constantly encouraged our work. Randall Schuh and Lynne Frost made this publication possible.

We thank Wilson Lourenço, Lorenzo Prendini, Michael Sologlad, Oscar Francke, and Andrew Jeram for reviewing various sections of the manuscript in accordance with their expertises and making many valuable comments and suggestions.

Our special thanks are to Galina Fet, Shari Sissom, and Marianne Braunwalder for their care, support, and for putting up with our time-consuming occupation of cataloging scorpions.

The works and influence of the late Professor Max Vachon are of tremendous importance to all scorpion taxonomists who have labored in the last 50 years, and will continue to be to those who follow. We are honored to dedicate this book to his memory.
